

To the creative coder reading this,

First of all, don't worry if you are an experienced coder or not. This class was structured for all types of people. It is a good way of learning both how to program and how to think creatively!

Here are a few reminders and suggestions:

- Do not rush assignments
  - Programming takes a lot of time, and a stressed brain does not help produce creative thoughts.
  - I usually do tasks in a span of a few days
- Study the references and in-class code
  - Programming references are your friend!
  - Creative references and in-class code are great ways to get inspiration and initial ideas.
- Take feedback well
  - Feedback sessions are one of the best parts of the class. Your peers will always give great suggestions.
- Give good feedback and questions (participate)
  - Your classmates and LadyK will really appreciate it. It gets the class going!
- Just start!!
  - Starting is the hardest part, but the rest will follow. Just believe in yourself.

Lastly, make sure to create projects that you are passionate about or have interest in. This will make the experience way more fun, and you will be really proud of your creations in the end!

All the luck,

Max
